### Abstract

**PURPOSE:** To optimally and easily adjust every kind of display condition by software without using an adjusting volume.

**CONSTITUTION:** This device is comprised by providing a display presentation circuit 23 which outputs image information to be displayed on a display part as a display signal, an adjusting data sending circuit 25 which sends out display condition adjusting data based on an instruction from an input part 3, and a superposition circuit 26 which superimposes the display condition adjusting data on the display signal at a control part 2, and providing an adjusting data separation circuit 11 which separates the display condition adjusting data from the display signal by receiving a signal sent from the control part 2, a register group 12 for adjusting data holding which holds the adjusting data changed according to separated display condition adjusting data, and a control means 13 which controls the display condition of a picture being displayed on the display part 14 according to those adjusting data at a display part 1.
